

AVOID THE SPARK™

Be battery safety smart.

Batteries CANNOT go in the recycling or trash carts!

TWICE THIS FALL, misplaced batteries have started fires at our **Napa Recycling Facility**. Luckily they were put out quickly, but fires from lithium ion batteries – the ones in your phone, tablet, laptop, drill or drone – are very susceptible to starting fires when they are punctured or crushed and have caused serious fires at recycling facilities in recent years.

Batteries can be dropped off at many sites around town – *see opposite side* for a full list or visit naparecycling.com/batteries. We also pick up batteries with our **Recycle More** program – find details on the enclosed insert and at naparecycling.com/recycle-more.

Thanks for your help in safely recycling batteries!
